

Frame Relay

CyberQuince

What is Frame Relay?

Frame Relay used to be one of the most popular WAN (*Wide Area Network*) connectivity options. It was the cheaper option than a *leased line*, or a direct, physical link between two sites.

* was = because it's no longer as widely used.

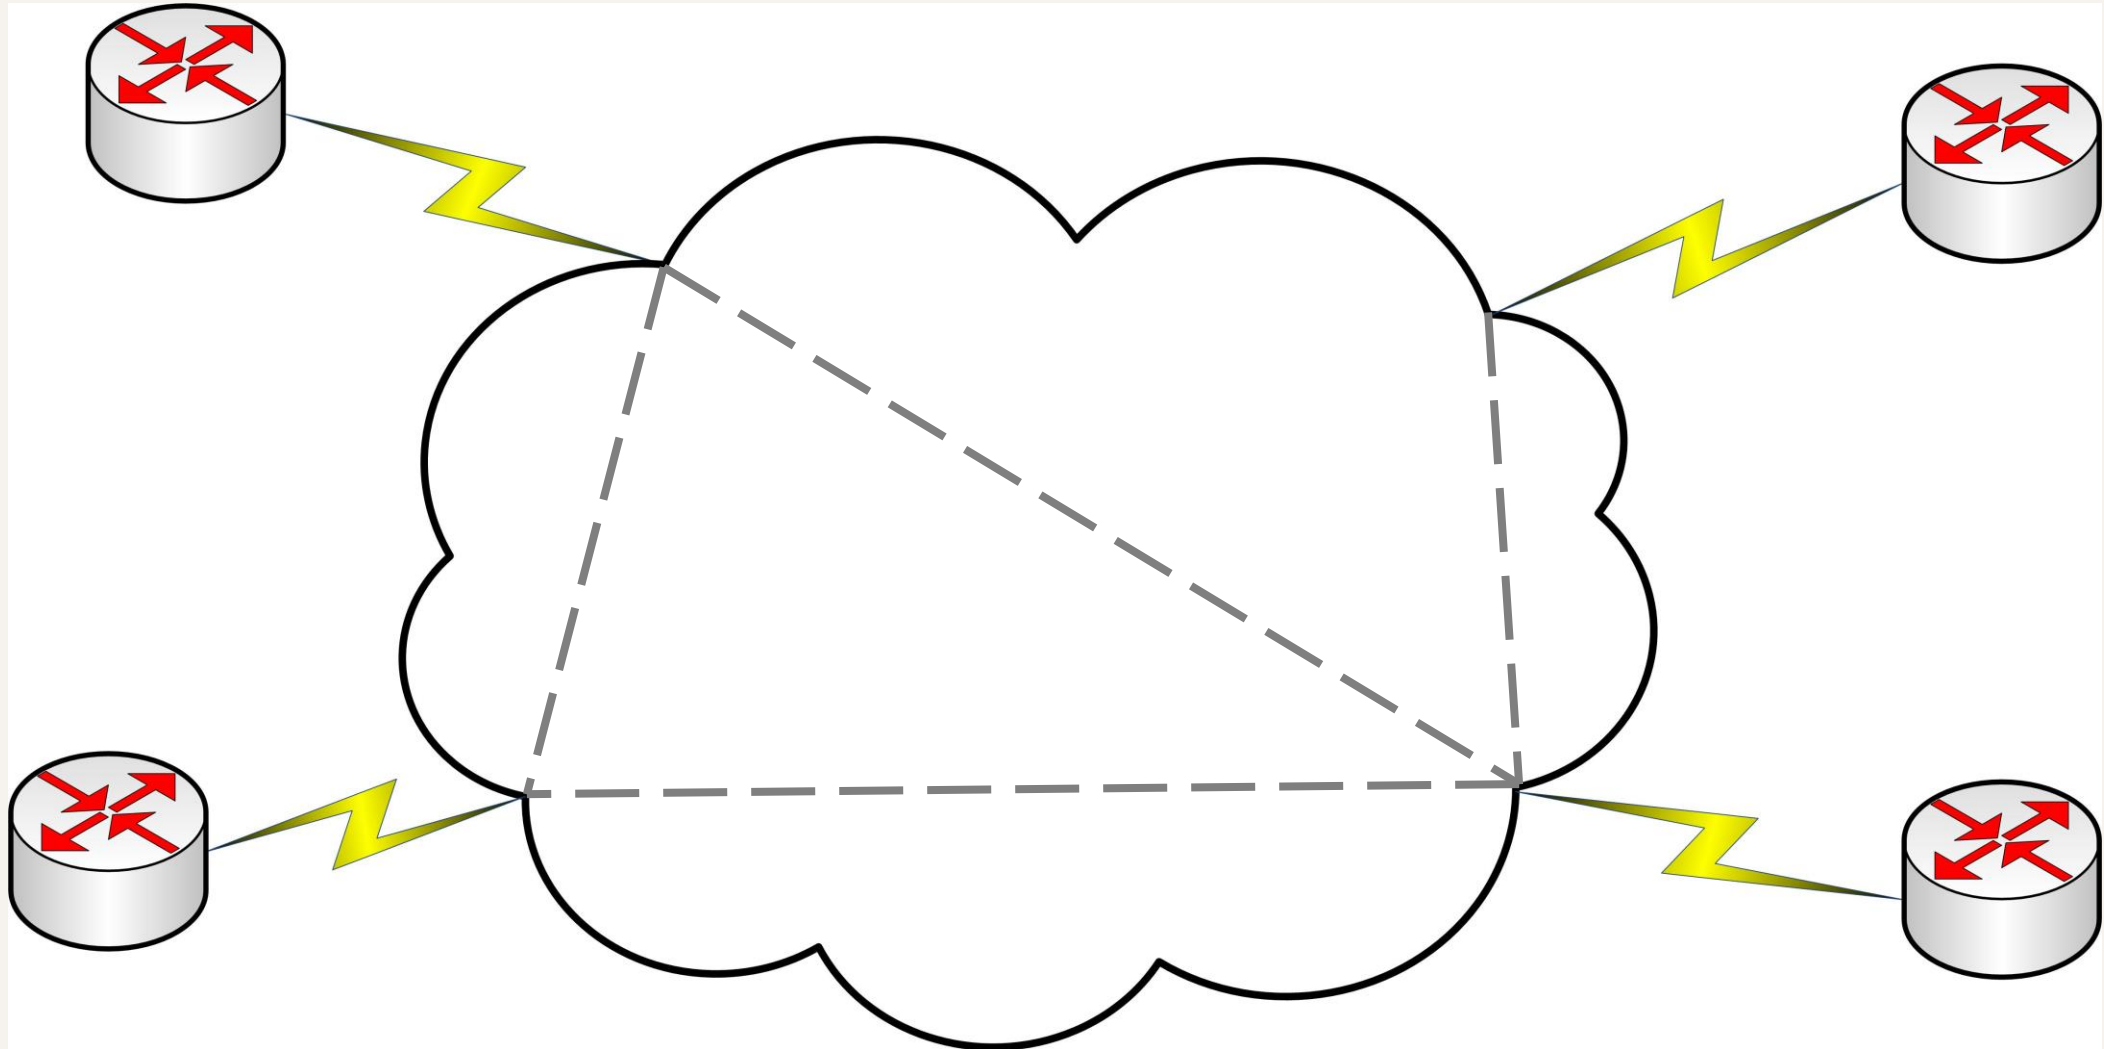

Frame Relay — Customer Side

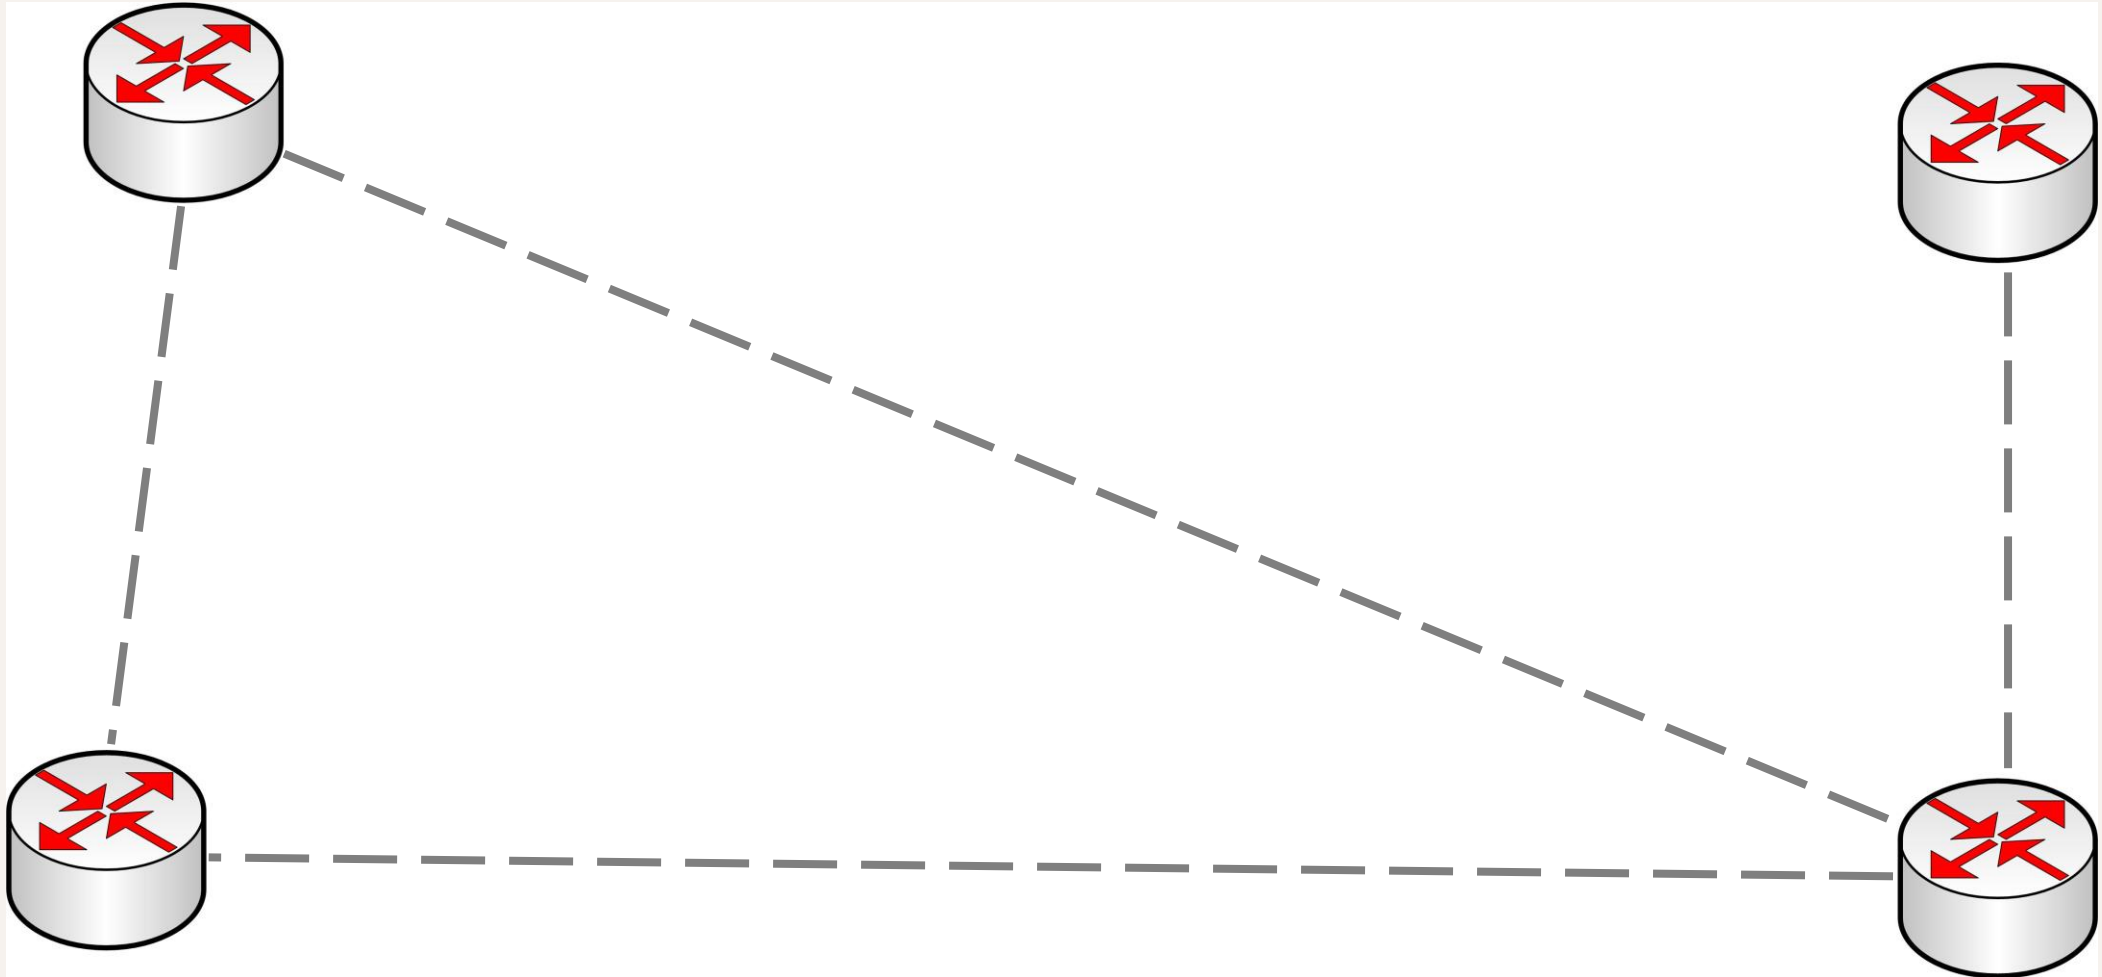

A Frame Relay provider will provide the following to its customers:

- CSU/DSU (Channel Service Unit/Data Service Unit) device; Can be configured on a router
- A PVC (Permanent Virtual Circuit)
- A DLCI number, which identifies customer's PVC
